# the total package

The new **Total Strength Serum** by PCA SKIN® offers a next generation peptide blend along with epidermal growth factors to tighten, strengthen and firm.

## benefits

---

- This product will strengthen skin structure and increase collagen production
- When used twice daily, this product helps reduce loss of elasticity and minimizes pores due to loss of elasticity
- The combination of a unique peptide blend with epidermal growth factors provides an ideal anti-aging formula with a cosmetically elegant feel

## patient indications

---

This new anti-aging product is best for patients concerned with laxity, wrinkling and enlarged pores.

## how it works

---

One of the most compelling new ingredients included in the new **Total Strength Serum** is the newest generation blend of matrix-building peptides, palmitoyl tripeptide-38. This newly developed amino acid chain has demonstrated the ability to increase the production of six highly important dermal and epidermal components:

- Collagen I
- Collagen III
- Collagen IV
- Fibronectin
- Hyaluronic Acid
- Laminin 5

**Patients will see a lifting, smoothing effect when used twice daily. Due to the advanced capacity of this peptide blend, patients will also see a noticeable reduction in the wrinkle volume, a decrease in the surface occupied by deep wrinkling, firming of the skin and an improvement in texture.**

## daily application

---

Morning and evening

## directions

---

After cleansing, apply two pumps to the entire face and neck twice daily for maximum skin strengthening.

# consider these product pairings for your patients

- spot-treat areas of fine lines and wrinkles with **ExLinea®**, followed by full-face application of **Total Strength Serum**, each of which utilize different peptides for optimal benefit

- for fine lines and wrinkles, and to promote an even skin tone

- for hyperkeratinization, photodamage and textural variances

- for dehydrated skin with fine lines and wrinkles
