

This antioxidant therapy supports skin metabolism. This treatment leaves skin purified, glowing and radiant.

before

Condition: acne and diffuse redness.\*

after

Solution: received one Oxygenating Trio® treatment and used Blemish Control Bar, Facial Wash Oily/Problem, Acne Gel, Rejuvenating Serum, Protecting Hydrator Broad Spectrum SPF 30 and ReBalance twice daily over a one-month period.\*

\*Photos not retouched.

**Key ingredients:**

**Superoxide Dismutase** – an enzyme that supports antioxidant defense.

**Fumaric Acid** – an antioxidant.

**Niacinamide** – a form of the B vitamin, niacin (vitamin B3), that hydrates and promotes a clear complexion. It does not cause the flushing response common with niacin.

**Hydrolyzed Candida Saitoana Extract** – a type of fungi that encourages skin detoxification.

**Hydrogen Peroxide** – a topical oxygen source effective in purifying the skin.

**Lactic Acid** – an alpha hydroxy acid (AHA) naturally found in milk and sugars. It is part of the skin's natural moisturizing factor (NMF) and moisturizes the skin.

**Glycolic Acid** – an alpha hydroxy acid (AHA) that is excellent for oily skin types.

**Salicylic Acid** – a calming lipophilic beta hydroxy acid (BHA) that helps promote a clear complexion.

## Oxygenating Trio® treatment protocol

### Cleanse

1. **Facial Wash Oily/Problem** – Cleanse the area of treatment thoroughly. Rinse and pat dry.

### Prep/degrease

2. **Toner** – Apply with a cotton pad to prep (degrease) the skin. Allow the skin to dry.

### Treat

3. **Activator** (Step 1) – Pour approximately a dime-sized amount into a small peel dish. Apply generously with a brush over the entire area of treatment. Allow to penetrate and dry thoroughly. The patient will feel internal warming as the skin is being stimulated. Fan the patient to keep them cool. You may proceed with the treatment once the product has absorbed and the patient’s skin is dry to the touch.
4. **Detoxifier** (Step 2) – Massage a dime-sized amount into the skin with your fingers in a circular motion for approximately two minutes. Take your time with this process as this step drives **Activator** (Step 1) into the skin and promotes circulation. Remove any obvious excess by gently blotting with a tissue

### Correct

5. After performing the first two steps of this trio, customize the protocol with a combination of corrective daily care products to address your patient’s particular concerns and skin care goals. Refer to your customization chart on page 280 for suggestions.

### Treat

6. **Oxygenator** (Step 3) – Massage a dime-sized amount into the skin with your fingers in a circular motion over the entire area of treatment. A little of this product goes a long way, so do not overuse, avoiding contact with the eyebrows and hair due to possibility of bleaching. Coverage should be thin, even and thorough.

### Hydrate & protect

6. **ReBalance** and the appropriate broad spectrum SPF product – Complete the treatment with this combination to calm, hydrate and protect the skin from UVA and UVB exposure.
9. **Peptide Lip Therapy** – Finish with a liberal application to improve hydration and reduce the appearance of lip lines.

**Note:** Apply the appropriate broad spectrum SPF product prior to applying **Peptide Lip Therapy** to protect the lips from UVA and UVB exposure.
